

Codebook: How technological change affects regional voting patterns

Nikolas Schöll and Thomas Kurer

Main data set: `sample.RDS`

This data set is used for the main analysis. It is structured as a panel for West German counties with yearly information between 1994 and 2017.

Variable description in detail:

Variable name	Description
<code>region</code>	County in West Germany (Kreise und kreisfreie Städte, NUTS-3). N = 324
<code>region_code</code>	Statistical identifier for each region
<code>state</code>	Bundesland
<code>year</code>	Year of observation between 1994 and 2017
<code>election</code>	Indicates which election was used for the party vote shares. This differs from years in case of state election where different election can be hold in the same year.
<code>election_type</code>	Type of election: national, European or state elections
<code>robot_count</code>	Estimated number of robots per region. Calculated as a shift-share instrument using information on industry-level information on robot adoption from IFR and regional employment shares from the IAB. See data section for more information.
<code>log_robots</code>	Measure of regional robot intensity, calculated as: $\log(\text{robot_count} / \text{emp.siab} * 1000)$
<code>robots</code>	Non-logged measure of robot intensity, calculated as: $\text{robot_count} / \text{emp.siab} * 1000$
<code>log_robots_eu</code>	Estimated regional robot intensity, using industry-level robot adoption in other European country. Used for IV-regressions.
<code>ICT</code>	Estimated regional ICT capital stock per worker in 1000 euros. Calculated as a shift-share instrument using information on industry-level information on ICT capital stocks from EUKLEMS and regional employment shares from the IAB. Calculated as: $\text{ICT capital stock in region} / \text{total employment in region} / 1000$ See data section for more information.
<code>ICT_eu</code>	Analog to <code>ICT</code> using industry level information on ICT capital stocks from other European countries.
<code>greens</code>	Regional party vote of the green party (Bündnis 90/Die Grünen) in in percentage point
<code>linke</code>	Regional party vote of Die Linke in in percentage point
<code>spd</code>	Regional party vote of the SPD in in percentage point
<code>fdp</code>	Regional party vote of the FDP in in percentage point
<code>cdu_csu</code>	Regional party vote of the conservatives (CDU, CSU) in percentage point

Variable name	Description
<code>greens</code>	Regional party vote of authoritarian right parties (AFD, DVU, Republikaner) in in percentage point
<code>emp.siab</code>	Total employment in the county. Estimated using IAB data: SIAB offers 2% of the universe of workers in Germany. This number is multiplied by 50.
<code>emp.siab_manufacturing</code>	Manufacturing employment in the county. Estimated using IAB data: SIAB offers 2% of the universe of workers in Germany. This number is multiplied by 50.
<code>individuals.siab</code>	Individuals from IAB data in region/year
<code>emp_foreign</code>	Share of foreign workers
<code>emp_female</code>	Share of female workers
<code>emp_above50</code>	Share of workers aged above 50
<code>emp_lq</code>	Share of workers classified as low qualified
<code>emp_mq</code>	Share of workers classified as mid qualified
<code>emp_hq</code>	Share of workers classified as high qualified
<code>emp_edu_no</code>	Share of workers with no formal degree
<code>emp_edu_low</code>	Share of workers with basic degree (Hauptschule or Realschule)
<code>emp_edu_high</code>	Share of workers with high degree (Abitur)

Sample for extended mechanisms section: `sample_mechanisms.RDS`

This dataset is used for Figure A.3 in the Appendix. All values are normalized to have mean 0 and a standard deviation of 1.

Variable name	Description
<code>region</code>	County in West Germany (Kreise und kreisfreie Städte, NUTS-3). N = 324
<code>region_code</code>	Statistical identifier for each region
<code>year</code>	Year of observation between 1994 and 2017
<code>log_robots</code>	Measure of regional robot intensity, calculated as: $\log(\text{robot_count} / \text{emp.siab} * 1000)$
<code>ICT</code>	Estimated regional ICT capital stock per worker in 1000 euros. Calculated as a shift-share instrument using information on industry-level information on ICT capital stocks from EUKLEMS and regional employment shares from the IAB. Calculated as: ICT capital stock in region / total employment in region / 1000 See data section for more information.
<code>population_16_64</code>	Population between 16 and 64 years old
<code>log_population_16_64</code>	Log population between 16 and 64 years old
<code>emp_rate_55_64</code>	employment rate for population between 55 and 64
<code>training</code>	Share of workers in training
<code>reintegration</code>	Share of workers in reintegration schemes
<code>highskill_share</code>	Share of workers classified as high-skilled.
<code>abitur_share</code>	Share of population with at least university entry-level education.
<code>average_age</code>	Average age
<code>median_age</code>	Median age
<code>birth_rate</code>	Birth rate
<code>share19-24</code>	Share of workers between 19 and 24
<code>share25_44</code>	Share of workers between 25 and 44
<code>share45-64</code>	Share of workers between 45 and 64
<code>net_inmove_total</code>	Regional immigration - emigration

Variable name	Description
<code>net_inmove_18-24</code>	Regional immigration - emigration for people between 16 and 24
<code>net_inmove_0_17_30_49</code>	Regional immigration - emigration for people below 17 or between 30 and 49

CHES data set: `sample_CHES.RDS`

Data set from Chapel Hill Expert Surveys on party manifestos of German parties between 1999 and 2019, on a left vs. right dimension (lr), and a Green-Alternative-Libertarian vs. Traditional-Authoritarian-Nationalist dimension (galtan).

Variable name	Description
<code>party</code>	Party Name
<code>year</code>	Year
<code>dim_lr</code>	party positioning on the lr dimension
<code>dim_galtan</code>	party positioning on galtan dimension
<code>dim_lr_mean</code>	average positioning across all parties / years, weighted by seats in parliament
<code>dim_galtan_mean</code>	average positioning across all parties / years, weighted by seats in parliament
<code>partycolor</code>	Color coding of each party
<code>label</code>	Combined text of party + year

Individual level data from SOEP: `sample_SOEP.RDS`

The data consists of individual-level survey responses from respondents living in West Germany.

Variable name	Description
<code>party</code>	Indicates which political party is supported by respondent
<code>sector</code>	Indicates if respondent is employed in the “manufacturing” or “non-manufacturing” sector
<code>year_bin</code>	4 year bins to aggregate data
<code>main_task</code>	Main task of workes. Categories are “cognitive non-routine”, “cognitive routine”, “manual routine”, “manual non-routine”.
<code>edu</code>	Education level of respondent, based on SOEP item <code>pgpsbil</code> Differentiates between “high” (no degree / Hauptschule), “middle” (Realschule) and “high” (Fachhochschulreife, Abitur)
